

Module 3 - Topic 3

3.3.3 Create your Image Clone

Create your Avatar using AI!

Step 0

- Collate 12-15 images of yourself
- Make sure the quality of images is good
- You should be the only subject in the video
- Try to include diverse postures, angles, scenes, etc

How to fine-tune a Image model?

- Gather your Images
- Select a Pre-trained model
- Setup the training environment
- Choose the finetuning process
- Save the model

How to do all this?

Making fine-tuning superrr easy!

fal.ai

The logo for Replicate, featuring a stylized white 'R' icon followed by the text 'eplicate' in a white, sans-serif font, all set against a red-to-yellow gradient background.

Replicate

replicate.com

These platforms take care of all the above steps - you only
have to bring your images!

Create your Avatar using AI!

ft. [fal.ai](#)

- Go to [fal.ai/models/fal-ai/flux-lora-fast-training](#)
- Give a name to the model
- Upload a zip files of your 12-15 images
- Click “CreateTraining”

In 5-10 minutes, your model will be ready to use!

Note: Training a model will incur one time cost of \$2

Create your Avatar using AI!

ft. Replicate

- Go to replicate.com/lucataco/ai-toolkit
- Give a name to the model
- Save your HuggingFace token hf.co/settings/token
- Upload a zip files of your 12-15 images
- Click "CreateTraining"

In 45min - 1 hour, your model will be ready to use!
